UTC Overseas Colombia S.A.S.

Our activity is focused on multimodal logistics and transport services to and from the different border points such as land borders, seaports and airports. We provide a global transportation services and specialize in complex logistics chains and turnkey project management.

We are experts handling project cargo, oversized and / or extra-heavy as Machinery, Transformers, Turbines; general project cargo, rolling or self-propelled cargo and / or special containers with extra weight / dimensions (Flat Racks, Open tops, etc...).

Always providing trusted solutions for our clients.

Present in Colombia since 2016, our offices in Cartagena and Bogotá, coordinate foreign trade operations with our network of offices. We have great global experience, almost 100 years, as UTC was founded in 1925, present in more than 25 countries and 5 Continents.

Specialized in the following industries: Heavy Equipment, Cement, Construction and Mining, Oil & Gas, Power & Energy, Chemicals, Packaging, Steel, Food, and Textiles.

We offer our clients the insurance for all their cargo, as well as the customs brokerage process in Colombia to operate in the specific terms of the client's negotiation.

Why UTC Overseas Colombia?

- Strong ties with maritime, air and land transporters that allow and thus offer a reliable, efficient and cost effective service.
- Experienced, proactive team that adapts quickly to changing market conditions, seeking to minimize interruptions in service.
- Unparalleled expertise in logistics and supply chain management, offering a "one stop shop" experience for all your transport and logistics needs.
- Innovative services, based on operational and documentation experience allowing the continuous physical and document flow, in order to comply with all deadlines.

Our mission is very simple

Anticipate the needs of our clients, in order to evolve and adapt appropriately to handle their valued cargo.

- Knowledge and experience on all of Colombia's International ports and airports
- Transshipments and direct or indirect warehousing.

Specific project services

- Road Surveys, Load/Discharge surveys, Feasibility studies, in between others.

Other services performed

Export Packing and Crating:

UTC ensures that every item is appropriately packed and prepared for the chosen method of transport. We also offer cargo consolidation services to assure the most efficient delivery of not only the heavy lifts of your project, but the general cargo as well.

Hazardous Material Handling:

Our project managers are trained to recognize and handle internationally classified hazardous materials. They understand and deal with the dangers and legal aspects of such loads. They do labeling and check packaging to insure compliance to international regulations and ensure proper completion of all regulatory paperwork.

Warehousing and Distribution:

UTC maintains an extensive network of warehousing and distribution points at strategic locations in Colombia. Cargo is handled using the latest technologies, and orders are filled and processed efficiently using state-of-the-art management systems.

Customs House Brokerage and Compliance:

UTC is an expert in the field of Customs Brokerage. By utilizing the most advanced technologies available, we are able to perform your Customs Brokerage work quickly, accurately and efficiently. UTC has sophisticated links with local customs service partner, IMEX for Colombian market.

Consulting/Heavy Engineering Services:

UTC works with civil engineers and local suppliers to provide you with detailed route studies. We find the best access roads and routing from the port to your job site by carefully reviewing underpass heights, bridge and pier strengths, weight limits and local, regional and national regulations which could affect the project.

Detailed Route Surveys

- Cargo handling and transportation Method Statements case by case.
- Basic cargo guidelines case by case.
- Route surveys with photographic detail in respect to road limitations.

On-Line Cargo Tracking:

UTC's service of cargo tracking allows you to monitor the status of cargo or project from anywhere in the world at any time, 24/7 service via the Internet. This service allows you to access all communications between the parties involved in the transport. This service is available in multiple languages and can be customized.

Multimodal Transportation:

Transportation tailor made solutions as per each individual case including ocean/river/land operations for special cargo (extra weight/dim).

Detailed Load/Discharge surveys:

Load/Discharge operations are personally supervised, when requested or deemed necessary. This activity is usually performed by a professional Port Captain or qualified Project Manager. All as per instructions, loading/discharge plan, security measures and all other activities that prevent the cargo from damages.
